Weakened Immune system

Decreasing Probiotics in Digestive System

After 30, age-related gut microbiota imbalance starts to appear;
From age 40 to 60, probiotics in digestive system reduced to 15%;
60, probiotics reduced to 5%

Gut Microbiota Imbalance (Gut Dysbiosis)

There're around 50 trillion of bacteria in human digestive system to help maintain health. They're called gut microbiota and can be categorized into three types: probiotics, bad bacteria, and neutral bacteria. An increasing number of studies have shown that 80% of the reported health issues are related to the imbalance of gut microbiota.

* Conditional pathogen Conditional pathogens are pathogens that can only cause disease or infection in certain conditions, for example, in individuals with a compromised immune system, or in individuals with a reduced resistance to infection (such as the elderly or newborns, or individuals on antibiotics) <https://www.healthsnap.tv/glossary/conditional-pathogen/>

“Research shows that gut microorganisms benefit us by producing vitamins, preventing the growth of harmful bacteria, training the immune system, and fermenting unused food (energy substrates). When the microorganisms within the microbiota live in relative balance, this state is called normobiosis. However, when this balance is upset, because one or more microorganisms has grown out of proportion to the other species, this results in a state of gut dysbiosis.” In the latter case, we need to consume probiotics to maintain our health.

Introducing MIRIKEL DigeZ Multi-Probiotic

DIRECTIONS FOR USE:
Take 1 to 2 packets per day. Mix it with lukewarm (37°C / 98.6°F) water or add it to liquid food. It may also be consumed by mouth.

STORAGE:
Store at room temperature. Avoid direct sunlight and heat exposure. Consume after opening.

WARNING:
• Keep out of the reach of children.
• Do not use if the package is damaged or open.
• Do not exceed recommended dose.
• Pregnant or nursing mothers, and individual with a known medical condition should consult a physician before consuming this product.

YIJIA

7 Types of Probiotics

Probiotics are live microorganisms that help restore the natural balance of gut bacteria in your digestive system. Different strains of probiotics have different effects; DigeZ includes 7 types of well-studied probiotics such as Lactobacillus Acidophilus, and Lactobacillus Fermentum to support your gut health. They are clinically proven to promote a healthy digestive tract and support a healthy immune system.*

Mixed Enzymes

DigeZ contains carefully selected digestive enzymes to support your gut health, especially for those with pancreas disorders. Digestive enzymes are complex proteins that help digest and break down food. They enable large macromolecules in the foods you consume to be broken down into smaller molecules, making sure that your guts can properly absorb nutrients.*

Green Tea Extract

Green tea extract is the concentrated form of green tea that has been credited with a range of health benefits, especially supporting detoxification. According to recent studies, the extract can help your body increase the production of detoxification properties due to its high antioxidant content, freeing your body from toxins.*

Fructooligosaccharides (FOS)

Fructooligosaccharides (FOS) are oligosaccharides that are found naturally in plants. While often used as an alternative sweetener, FOS are also clinically tested to possess health benefits. These calorie-free, non-cariogenic, and soluble dietary fibers are considered prebiotics. They help feed the good bacteria in the intestines, providing benefits to your digestive system.*
